应运而生的 环保材料

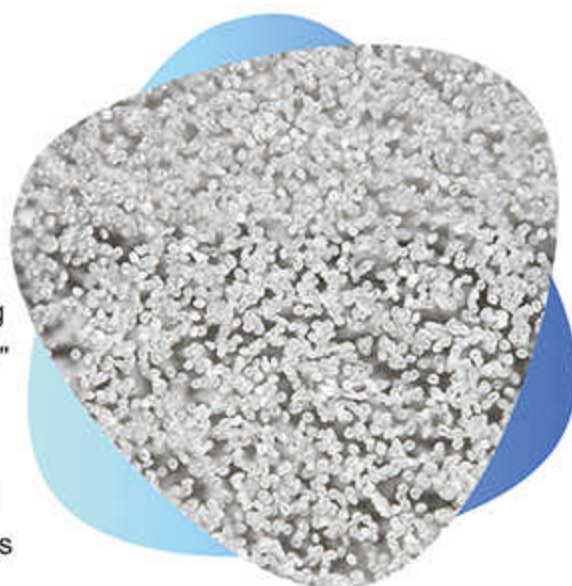

ENVIRONMENTAL
PROTECTION MATERIALS
CAME INTO BEING

伴随着环保意识的提高，人们愈发追求健康、高质量的生活品质。更倾向于使用安全、绿色的基材。因此，寻求一种乃至一系列在性能上能实现对传统塑料的替代，而且具有环境友好型的新型材料显得尤为必要。

PLA，全称聚乳酸或聚丙交酯，是以乳酸或其二聚体丙交酯为单体，经一系列化学反应而得到的聚合物，属于合成高分子，具有生物基、可降解等特点。

With the promotion of environmental awareness, people are increasingly pursuing healthy and high-quality living style, and are more inclined to use "safe and green" materials. Therefore, it is particularly necessary to seek environmentally friendly alternative to replace conventional plastics.

PLA, full name polylactic acid or polylactide, is a polymer obtained by a series of chemical reactions with lactic acid or its dimer lactide as monomer, which belongs to synthetic polymer and has characteristics of bio-base and degradability.

聚乳酸源于自然且能够完全生物降解的特性，驱动生物质资源形成了一个再生及循环体系：从原材料看，聚乳酸的原料是将玉米、甘蔗、甜菜等农作物深加工提取的糖发酵而成的乳酸；从制品处置来看，聚乳酸制品能够降解为二氧化碳和水，通过农作物的光合作用再次参与生物质的再生及循环过程。

PLA comes from nature and it is fully biodegradable, which makes biomass resources renewable and recyclable. The beginning of PLA's life cycle is its raw material lactic acid, which is fermented by sugars extracted from crops such as corn, sugarcane and sugarbeet. The end of PLA's life cycle is its disposal, the water and carbon dioxide generated from PLA's disposal will go back to nature through the photosynthesis of crops.

PLA Cold Cups and Lids

PLA SERIES

100% Biodegradable PLA Material

PLA Cold cups & Lids are a type of biodegradable and compostable cup which is made from plant-based materials. These cups are designed to be more environmentally friendly than traditional plastic cups because they break down more easily in composting environments and have a lower carbon footprint.

- Various sizes available
- A selection of matching domed or flat lids are available
- Perfect for cold beverages on the go
- Can be customized printing brand LOGO, particular specifications products can be opened according to customer needs mold

SUGARCANE FIBER PRODUCT

Biodegradable Plant fiber product 可降解植物纤维制品

Paper Pulp is a kind of fiber material, that is made from natural plant fiber, with bagasse, wheat stalk, bamboo and other natural plant fiber as the main raw material through modern technology to extract cellulose and then through dehydration, molding, drying a series of processing, and the use of food-grade waterproof and oil-proof technology, and then made by

纸浆是一种纤维材料，由天然植物纤维制成，以甘蔗渣、麦秆、竹子等天然植物纤维为主要原料经现代工艺提取纤维素再经脱水、成型、烘干一系列处理，并采用食品级防水防油技术，再经深加工制成。

Plant fibers are biodegradable materials that can be broken down in the natural environment without causing harm. The biodegradation time is usually 60-90 days. In this process, natural organic components are continuously released from the body and sent back to nature as various nutrients, enriching the surrounding natural environment. Pulp products are a perfect alternative to foam and plastic products.

Our products are waterproof and oil resistant, without a coating, and can be used to package various foods! Oven & microwave & refrigerator safe, provide users a wide range of usage. Products are sturdy and strong and durable. It is both environmentally friendly and cost effective, making it ideal for industries that adhere to the trend of sustainable development. Our company produce variety of regular products and customized products which could fulfill customers' need.

产品防水防油，没有涂层，可以用它来包装各种食物！也可使用烤箱，微波炉和冰箱来加热和冷藏，为用户提供广泛的使用范围。纸浆模塑产品坚固结实，经久耐用。其既环保具有成本效益，是坚持可持续发展趋势的行业的理想选择。我司生产各种常规产品和客户定制产品，以满足您的所有订单需求。
